

project

1. A system is being constructed to keep track of airplanes, their owners, and pilots. Each airplane has a registration number, is of a particular type and is stored in a particular hanger. Each plane has a model number and a weight. Each hanger has a number, a capacity and a location. An owner is a person or a corporation. The date the airplane was purchased by the current owner is kept. A pilot has a license number. All persons in the database have a SSN, name and telephone. A corporation has a name, address and telephone. The system keeps track of which airplane types a pilot is qualified to fly.
